

"The most effective treatment available for thread veins"

Beauty Clinics, Spas and Salons have been searching for the most effective method to treat Thread Veins and the problem of Rosacea on the face for many years.

Now at last V-Beauty™ using the well established process of 'thermo-coagulation' has been made available to the Beauty Industry. V-Beauty™ is unique in its utilisation of this technique, replicating the highly acclaimed Veinwave™ procedure used in medical practice. Combined with the use of our Polarised Light System, there is no other such treatment as effective or as safe.

The Polarised Light System provides a clear view of the sub-surface vessels. These would not be visible with a normal magnified headlight. The Polarised Light System allows faster, more accurate treatment.
